

School Bus Surveillance Solution

Features

- Students get on/off bus management: Students swipe ID card when get on/off bus. Parents will get the latest details of their children via message or email.
- Reminder function: Alarm triggers after bus ignition is off. Driver has to go along and turn off the alarm at the rear side in the bus. It can remind the driver better in case the students are left in the bus.
- Passenger counting system: By integration of passenger counting device to check whether students is short in total number. It can count the numbers of students who get on and get off the bus. By comparing the numbers, the students who have been left in the bus will be noticed easily and quickly.
- Video surveillance: Parents can see what is happening in the bus.
